Sequence 3, Application US/10731961
Publication No. US20050130306A1
GENERAL INFORMATION:
APPLICANT: Voeliny, Richard W.
TITLE OF INVENTION: VIRAL VECTORS WHOSE REPLICATION AND, OPTIONALLY, PASSENGER TITLE OF INVENTION: ARE CONTROLLED BY A GENE SWITCH ACTIVATED BY HEAT IN THE PILLE OF INVENTION: OR ABSENCE OF A SMALL MOLECULE REGULATOR
FILLE REPERENCE: Replicating virus
CURRENT APPLICATION NUMBER: US/10/731,961
CURRENT FILING DATE: 2003-12-10
                                                                                                                                                                                                                                                                                                                                                                                            2761

US-09-782-378A-4
; Sequence 4, Application US/09782378A
; Patent No. US20020102731A1
; GENERAL INFORMATION:
APPLICANT: Hearing, Patrick
APPLICANT: Sandalon, Ziv
APPLICANT: Sandalon, Ziv
APPLICANT: Gnatenko, Dmitri
TITLE OF INVENTION: Adenoviral Vectors
FILE REFERENCE: STONYB-04970
; CURRENT APPLICATION NUMBER: US/09/782,378A
; CURRENT FILING DATE: 2001-02-12
; PRIOR APPLICATION NUMBER: 60/237,747
PRIOR APPLICATION NUMBER: 60/237,747
PRIOR APPLICATION NUMBER: 60/237,747
; PRIOR APPLICATION NUMBER: 60/237,747
; PRIOR PATELING DATE: 2000-10-02
; NUMBER OF SEQ ID NOS: 27
; SOFTWARE: PatentIn version 3.0
; SEQ ID NO 4
; SEQ ID NO 4
; SEQ ID NO 4
; ORGANISM: Human adenovirus type 5
US-09-782-378A-4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś

Publication No. US20040097455A1
GENERAL INFORMATION:
APPLICANT: Aguilar Cordova, Estuardo
TITLE OF INVENTION: Recombinant viral and non-viral vectors
TITLE OF INVENTION: containing the human gene of the urokinase plasminogen
TITLE OF INVENTION: types of fibrosis such as hepatic, renal, pulmonary,
TITLE OF INVENTION: bancreatic, heart fibrosis as well as hypertrophic scars
FILLE REFERENCE: 558-035-994(205/19071)
CURRENT APPLICATION NUMBER: US/10/432,989
CURRENT APPLICATION NUMBER: US/10/432,989

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            14 (bases 1 to 66)
Nagata, K., Guggenheimer, R.A. and Hurwitz, J.
Specific binding of a cellular DNA replication protein to origin of replication of adenovirus DNA
Proc. Natl. Acad. Sci. U.S.A. 80 (20), 6177-6181 (1983)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hearing, P. and Shenk, T.

Hearing, P. and Shenk, T.

Functional analysis of the nucleotide site for adenovirus type 5 region EIA J. Mol. Biol. 167 (4), 809-822 (1983)
                                                        the sequence represents the early mrna transcripts ela and elb and the intermediate mrna transcript ix, all of which are transcribed trightwardly off the r-strand; the iva2 and e2b mrnas which are transcribed leftwardly off the 1-strand ((indicated by '(c)' and 'comp strand' below)); and the 5' end of the 28 kb major late mrna. the cap sites and possible promoter sequences for these are summarized in the following table:
                                                                                                                                                                                                                                        This sequence corresponds to bases I to 11560 of <ad2>, which serve as some basis for the annotation of sites the differences between <ad2> and <ad5> are too many to report herein, however a printout of those is available upon request from genbank the map coordinates in the sites presume 360 bases per map unit. although there are approximately 115 sequence differences between the two strains over this region, no site difference exceeds 0.02% by this
                                                                                                                                                                                                                                                                                                                                                                                                      Here Adeno virus sequences are always given in 5' to 3' direction and the sequence of the 1-strand is displayed irrespective of the direction the viral transcription takes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The nucleotide sequence of fragment HindIII-C type 5 DNA (map positions 17.1-31.7) Gene 27 (1), 115-120 (1984)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Dekker, B.M. and van Ormondt, H.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              84016017

with ad2, not all the transcripts from this region have been characterized at the sequence level, the nine proteins given in features table below are not the only possible gene products (see the main adenovirus 2 entry).

large amounts of small rnas are produced from the val and vaii genes late in development for unknown reasons. [5] and [6] demonstrate that val gene activity influences vali expression; that the 5' flank affects the start site of the rna but that an intragenic promoter (bases 10636 to 10690 below) determines whether the rna is actually produced; and that there is striking similarity between this rna and trna.
